SUMMARY

Dot NET Developer with 4 years of experience building scalable, enterprise-level web applications using .NET Core, Web API, and SQL Server. Highly skilled in N-tier architecture, repository and service pattern implementation, ORM frameworks, and RESTful API design. Proficient in C# and SQL Server for backend development, and experienced in front end technologies including HTML, CSS, JavaScript, and TypeScript with Angular. Demonstrated ability to translate design mockups and requirements into efficient, maintainable code. Experienced in collaborating with cross-functional teams, optimizing database performance, and delivering high-quality, secure, and maintainable solutions following SOLID principles.

SKILLS

- **Programming Languages:** HTML5, CSS3, Bootstrap, JavaScript (ES6), TypeScript, DHTML, C#, SQL
- **Frameworks:** ASP.NET Web Forms, ASP.NET Core, ASP.NET MVC, Angular
- **ORM Framework:** Entity Framework Core (EF Core), LINQ, JWT Authentication (Identity Framework Core)
- **Database:** SQL Server
- **Web Technologies:** HTML5, CSS3, Bootstrap
- **Web Services:** Asp.Net Core Web API
- **Web Server:** IIS
- **API Development:** Postman, Swagger
- **Versioning Tool:** Git, GitHub, Azure DevOps
- **Defect Tracking Tool:** JIRA, Zoho Projects
- **Methodologies:** Agile, Scrum
- **IDEs:** Visual Studio, VS Code

Dot Net Developer

PROFESSIONAL EXPERIENCE

- Full Stack .NET Developer skilled in ASP.NET Core, C#, Angular, JavaScript, SQL Server, and Web API for building dynamic, high-performing web applications. Developed scalable RESTful APIs and responsive user interfaces using Angular, Bootstrap, and CSS3, resulting in a measurable improvement in user engagement metrics.
- Implemented efficient data access layers utilizing ADO.NET and Entity Framework, leading to optimized data retrieval speeds and enhanced application performance. Created and maintained custom middleware for authentication, logging, and error handling, bolstering application security and streamlining debugging processes.
- Actively participated in Agile/Scrum teams, contributing to code reviews, sprint planning, and CI/CD pipelines, consistently ensuring on-time and high-quality project deliveries.
- Built and managed RESTful Web APIs for efficient data exchange between client and server systems. Strong experience in Systems Analysis, Design, Development, and Implementation of Web and Windows applications using N-tier Architecture across all stages of the SDLC.
- Integrated third-party services via APIs to extend application functionality and improve overall system capabilities.

PROJECTS

Abnormalities management System

HTML5 | CSS3 | JavaScript | C# | MS- SQL Server (Database) | Bootstrap | Entity Framework core | Razor Pages | Azure DevOps | Git | GitHub

This project developed and deployed for Abnormality Management System is a comprehensive web-based solution designed to manage and resolve abnormalities across safety, quality, and engineering domains within an organization, ensuring efficient tracking, resolution, and prevention of abnormality issues. Project is an online system where any user to report abnormalities by submitting details.

Responsibilities

- RESTful APIs to manage core system modules, including Abnormality Tracking, Corrective Action Plans
- Built secure, role-based JWT Authentication Using Identity Framework and ASP.NET Core Web API.
- Used Swagger for API documentation and Postman for testing.
- Designed and optimized relational schemas in SQL Server to manage complex data relationships between detected abnormalities, production assets, and resolution workflows.
- Developed stored procedures and triggers to automate the status updates of abnormalities, ensuring real-time data consistency across the AMS ecosystem.

E-Traceability System

HTML5 | CSS3 | TypeScript | C# | MS- SQL Server (Database) | Bootstrap | Entity Framework core | Angular | Azure DevOps | Git | GitHub

An E-Traceability product manufacturing traceability software system is a digital solution that enables real-time tracking, management, and traceability of materials, components, and workflows throughout the production process, replacing traditional paper-based cards record with barcodes and web-based dashboards for enhanced speed and accuracy editing, and scheduling their display

Responsibilities

- Developed **ASP.NET Core Web APIs** for Raw Material Management, Inventory, and Batch Traceability modules.
- Designed and optimized **SQL Server** databases, stored procedures, and **Entity Framework Core** operations for efficient data management.
- Built secure, role-based JWT Authentication Using Identity Framework and ASP.NET Core Web API. Used Swagger for API documentation and Postman for testing.
- Collaborated in **Agile/Scrum** teams using **Git** and **Azure DevOps**, while implementing secure **JWT authentication** and resolving production issues.

EDUCATION

Sant Gadge Baba Amravati University

Bachelor of Engineering (ENTC)
